**What went well?**
All merges worked.
We had a few days not developing new features but polishing the result we had accomplished.
The presentation went well.

**What went bad?**
A few merge conflicts due to branches working on top of outdated main-versions.

**What can we learn from that?**
Be more careful to make sure the most up to date branch is being branched from.
Also merge the most recent version into the working branch before giving it to merge into main. It was good planning to aim to be finished with the program before the last sprint. By doing this we could use the last half-sprint to fix bugs e.g.

**How can we use that new knowledge for the next sprint?**
There is no more sprint, but if there were one then we could be more careful with making sure everything is taken from the up to date main branch.
We also would make an effort to merge more frequently.
